

Neutralize threats Prevent breaches

Malware Protection Plus is a Next-gen Antivirus that neutralizes ransomware, prevents malware exploits, and stops breaches. Equipped with AI-powered scanning, autonomous disinfection, and real-time behavior detection, it is a replacement for legacy antivirus (AV) and an upgrade over modern AV solutions.

Key capabilities

Detection that sees what others miss

- Machine learning and AI to prevent seen and unseen malware.
- Advanced memory scanning that prevents fileless attacks and ransomware.
- Indicators of attack (IoA) that block malicious behaviour and intent.
- Perform deep malware scans within your systems for added precaution.

Real-time containment for evasive threats

- Exploit prevention that blocks malicious execution via system vulnerabilities.
- Detect and isolate malware and revert affected files and registry objects.
- Anti-Ransomware with encryption prevention and secure file recovery.
- Halt malicious processes and stop them from execution.

From incident to investigation to insights

- Process trees that break down attacks and map their progression.
- Real-time incident alerts that provide context and details.
- Map attacks to MITRE Adversarial Tactics, Techniques and Common Knowledge (ATT&CK®) framework

Cybercriminals aren't playing by old rules anymore. Why should you?

Signature-based detection, reactive updates, and reliance on known malware samples make legacy AV slow, ineffective, and blind to modern attacks. Today's adversaries use AI-driven, fileless, and sophisticated malware that can bypass static defenses in seconds.

Enter Next-Gen Antivirus (NGAV).

Powered by AI and behavioural analysis, NGAV doesn't just detect known threats—it scans, prevents, and decimates attacks without requiring any signatures. With exploit prevention, and automated malware disinfection, NGAV shields against even the most sophisticated zero-day threats and ransomware.

 **~1%**

System bandwidth used by our agent, minimizing resource footprint

 **3M**

Endpoints currently under continuous 24/7 protection

 **>99%**

Ransomware detection accuracy with patented behaviour analytics engine

Key benefits

Rapid
deployment

Self-healing
security

Light, high
performance agent

Always on,
even offline

Intuitive, web-
based control

Segmented
protection
